

PRINTPAN

PRINTPAN with plain colours : MDF panels with higher density in 3 mm thickness are coated with two layer of primary paint in panel painting unit. Than, they passes through the printing line for two layers of main colour. After the lacquering process with UV property for the durability and brightness, they are supplied to the market.

PRINTPAN with wood colours : They pass through the same units above until the application of the main colour by printing. Than, they are given the required colour/design by the independent design cylinders and UV lacquered for the durability and brightness. PRINTPAN is presented to the market in the dimensions of 1700x2100 mm and 2100x2800 with its rich colour range. In addition to 3 mm thick printpan panels. thickness, other thicknesses of MDF and chipboard will be available soon and our clients will have a very wide, competitive and rich product range.

Printpan has many advantages for door production.

- * Wide color range
- * Resistant to high moisture
- * Light weight
- * Easy to manufacture

Printpan is excellent for all kind of furniture products with different colors.
